

Across the continent, native wildlife populations are in severe decline: 1 in 3 mammals and 1 in 7 birds are threatened with extinction. Sadly, even our national parks resemble marsupial ghost towns.

Discover how the world's largest private conservation organization, Australian Wildlife Conservancy (AWC), is implementing ground-breaking new initiatives to save Australia's wildlife from extinction across more than 6.5 million hectares in iconic places such as the Kimberley, Cape York, Lake Eyre and the Top End. We are developing an exciting new model for conservation – a model that delivers an exceptional return on investment and is capable of reversing the sharp decline in Australia's natural capital.

This is a presentation that will leave you feeling inspired about how we can successfully halt and reverse the tide of extinctions in Australia.
